

MAYA 3D : A POCKET ORACLE

Maya 3D is a portable oracle, based on **Ancient Maya Astronomy**, developed exclusively for **iPhone** and **iPod Touch**. Made after extensive research, it is both a guide and a reference for the **Ancient Maya Calendars**, filled with several pages of information.

The mayas used their calendars as an oracle to determine civil and religious activities, as well as to find answers for daily problems. This culture is now in your hands!

You can check out **daily predictions**, **personality analysis**, see the **maya glyphs**, actual **phase of the moon**, know the **energy** of the Day, **convert dates** between calendars and visualize all the beauty of the Maya Calendar in an **interactive 3D clock**.

The app is synchronized with the device clock, but you can choose **any date** and save them on the **Datebook**. You can also **save screens** to your device image library to send to friends, post in blogs or your favorite social network.

Maya 3D is available at the Apple App Store for only **US\$2.99**.

A **free Lite** version is also available, featuring only the interactive 3D clock.

Complete Press Kit, with high-res images and all texts included on the App:
